Serial Port Monitor is a professional software application that allows reading and recording serial data going through your computer's serial ports. The program is a big help for those who develop and debug software and hardware solutions that use COM ports for serial data transfer. \$\begingroup\$ I actually think that this is on-topic. There are some pieces of software that can capture serial data from a COM port (some of them even when another application is using the port), and the software is actually specialized enough that most people don't know it exists. To test the connection - make sure the Open button is pressed, and then press the Change button. Now you can send commands to the port (go to Send tab), and check if Roomba is responding. If you are connecting with a Bluetooth device - pay attention to the lower- right side of the screen shot below.
